

PROJECT TITLE:

Fiscal Year 2023 Water Main Replacement Project

PROJECT OVERVIEW: The project consists of standard trench replacement of approximately four miles of aging and at-risk potable water main pipes. The water mains were selected as part of the City's ongoing Water Main Replacement planning efforts, which helps prioritize the most important locations.

PROJECT BENEFITS: The project will replace approximately two percent of existing public water infrastructure to deliver a safe and steady supply of potable water to the community within the City of Santa Barbara. This maintains the structural integrity of the City's water distribution systems and reduces the risk of future main breaks.

QUICK FACTS

Location: Three locations throughout the City (State Street, Alameda Padre Serra, and Foothill Road)

Construction Schedule: winter 2025 – summer 2025

Construction Contract Costs: \$9,111,244

Funding Source: Water Main Replacement Fund

CONTACT INFORMATION

City Project Manager: Mehdi Moussavian, Project Engineer
