

City of Santa Barbara
Public Works Department

Minimum Site Plan Requirements for Onsite Projects

A proposed site plan shall generally follow Community Development/Building & Safety's requirements found [here](#).

The proposed and or existing site plan shall also contain the following for Public Works' review:

- ☐ Location and available information on existing water meters.
- ☐ Proposed location and size of new water meters and services (Note: City water main information is available by emailing pwcounter@santabarbaraca.gov or assigned staff).
- ☐ Proposed location and specification of backflow prevention devices (refer to Municipal Code or City Standard Details for requirements).

- ☐ Approximate location of existing sewer lateral. Note any other information available.
- ☐ Copy and paste on plans the letter of results or required repairs of any Sewer Lateral Inspection Program items.
- ☐ Proposed location and size of any new sewer laterals.

- ☐ Show and reference appropriate City Standard Details for any construction in the public right-of-way. This typically includes new or modified driveway aprons or similar.

Public Works Staff may require additional information to be indicated on the proposed site plans specific to the project.

**The above addresses Public Works Department concerns and requirements.
Other City Divisions/Departments may have additional requirements.**
